## Information about COVID-19 Vaccination

The COVID-19 vaccine you have received is an additional recommended dose to achieve the best possible protection, and for the protection to be as long-lasting as possible.

The vaccine has been assessed to be safe for use. However, just like other vaccines, you may experience some side effects such as headache, body aches, tiredness and soreness at the injection site, or fever. These usually get better after 1-3 days and may be a sign that your immune system is making a protective response against COVID-19.

### Past COVID-19 Vaccination Record(s)

#### After Vaccination Advice

| Possible Side Effects                         | How to Manage                                                                                          |
|-----------------------------------------------|--------------------------------------------------------------------------------------------------------|
| Pain, redness, swelling at the injection site | Those with fever are advised to self-isolate at home until the fever subsides.                         |
| Fever, chills                                 |                                                                                                        |
| Headache, muscle pain, joint pain             | Paracetamol 1 to 2 tablets every 6 hours for adults or dosed according to the child's weight as needed |
| Tiredness                                     | Rest                                                                                                   |
| Lymph node swelling at neck or arms           | Usually gets better by itself in a week or so                                                          |

#### See a doctor if:

- the side effects persist or get worse
- the fever persists for more than 48 hours

You can also report any side effects that you experience to HSA via: [go.gov.sg/srf](https://go.gov.sg/srf)

This vaccine may cause a severe allergic reaction in very rare instances. If you experience a severe allergic reaction (difficulty breathing, swelling of your face, throat, eyes or lips, a fast heartbeat, dizziness or weakness, rash all over your body), please seek immediate medical attention by calling 995 or going to the nearest A&E. The doctor will also decide if you should receive the second dose of the vaccine.

If you experience chest pain, difficulty breathing or abnormal heartbeats, please also seek medical attention immediately.
